[5 problem sets, each worth 20 points]

SOLUTIONS: Problem 1. Wembawemba expressing possession

Wembawemba is an indigenous Australian language previously spoken in Victoria. There are no longer any fluent speakers of this language; the last speakers were recorded by Luise Hercus in the 1960's; in compiling her Wembawemba dictionary (and in her other writings on Victorian languages) Hercus also included the work of earlier recorders of the language.

Possession is marked by a set of pronoun suffixes or endings (with meanings akin to *my*, *your*, *his/her/its* etc.) which attach to the word referring to the possessed entity. However each of these suffixes takes at least three distinct forms.

Study these Wembawemba words and their English counterparts:

Wemba-	English	Wemba-	English	Wemba-	English	Wemba-	English
wemba		wemba		wemba		wemba	
wutyup	stomach	tyinə	foot	kurrm	breast	lar	country
wutyupek	my stomach	tyinəngek	my foot	kurrmbuk	her breast	larnuk	his/her country
wutyupin	your stomach	tyinəngin	your foot	kurn	throat	mir	eye
wutyupuk	his/her/its stomach	tyinənyuk	his/her/its foot	kurnduk	his/her/its throat	mirnuk	his/her/its eye
tjel	net	ngani	waddy	paring	track	yiren- yiren	eyebrows
tjelek	my net	nganingek	my waddy	paringguk	his/her/its track	yiren- yirendek	my eyebrows
tjelin	your net	nganingin	your waddy	kurratyuk	his/her/its fat	yiren- yirendin	your eyebrows
tjeluk	his net	nganinyuk	his/her waddy	merterruk	his/her/its bone	yiren- yirenduk	his/her/its eyebrows

NOTE: In the Wembawemba writing system ng represents the consonant sound in English singer and not the sequence of the two consonant sounds n + g as in finger. The sequence ty represents a single consonant sound close to English ch in chin. There are two distinct 'r' sounds in this language: the consonant sound written with a single 'r' symbol is quite different from the one written with two 'r' symbols. In other words 'rr' does not represent two consonant sounds, but just one. ϑ represents the vowel sound of 'e' in open or of 'er' in singer.

Part 1. (10 points)

The Wembawemba possessive pronoun endings each come in several forms.

- In Column 1, below, list all the forms which translate as English his, her or its
- In Column 2, write a word containing the possessive ending written in Column 1
- In Column 3, explain the environment or condition in which each form is used

Wembawemba Example word		Environment in which form is used		
endings				
-uk	wutyupuk/ tjel	following word ending in a consonant other	2	
		than nasal (n, ng, m) or r		
-nyuk	tyinənyuk/	following word ending in a vowel	2	
	nganinyuk			
-duk	kurnduk	following word ending in 'n'	1.5	
-nuk	larnuk / mirnuk	following word ending in 'r'	1.5	
-buk	kurrmbuk	following word ending in 'm'	1.5	
-guk	paringguk	following word ending in 'ng'	1.5	

Part 2. (6 points: 1 each)

a.	kunənyuk means 'its guts'	what is the word for 'guts'?	kunə
b.	mirrkuk means 'its egg'	what is the word for 'egg'?	mirrk
c.	kurrk means 'blood'	how do you say 'your blood'?	kurrkin
d.	mula means 'hip'	how do you say 'your hip'?	mulangin
e.	ngapundek means 'my grandchild'	use a hyphen to break the word into the part meaning 'grandchild' and the part meaning 'my'	ngapun-dek
f.	kurratyuk means 'its fat'	use a hyphen to break into the part meaning 'fat' and the part meaning 'its'	kurraty-uk

Part 3. (4 points: 2 points for right form and 2 points for correct reasoning)

If we know that *ngarrəngek* means 'my hair', is the word for 'hair' *ngarrə* or *ngarrəng?* Give the reasoning behind your answer. (Recall that *ng* represents a single sound as in English *singer*.) 'hair' = *ngarrə* because the 'my' ending following a word ending in a vowel is *ngek*, whereas if 'hair' were *ngarrəng* then the 'my' ending would be *gek* as with *paring* 'track' giving *ngarrənggek* (for 'my neck') which is not the correct recorded form.

SOLUTIONS: PROBLEM 2: Zoque word formation

Zoque is a language from southern central Mexico. There are several dialects of Zoque which are spoken by over 30,000 indigenous Mexicans. The Zoque language is a member of the larger Mixe-Zoque group of languages.

Zoque words can be very complex, incorporating parts which mark plural and also parts expressing meaning which in English are expressed by separate words (such as prepositions, e.g., *on, for...*). An example of an English complex word is *un-manag(e)-abil-ity*.

Study these Zoque words:

NOTE: a represents the vowel sound of English 'e' in *open*; ? represents a glottal stop which is the sound we get in the middle of the expression of disagreement *nuh-uh*; ŋ is the consonant sound represented by 'ng' as in *sing*; š is the sound written 'sh' in *she*.

1.	pən	man	11.	yomo	woman
2.	pənta?m	men	12.	yomohi?ŋ	with a woman
3.	pənkəsi	on a man	13.	yomotih	just a woman
4.	pənkotoya	for a man	14.	yomo?une	girl
5.	pənhi?ŋ	with a man	15.	kahši	hen
6.	pənkəsita?m	on men	16.	kahši?une	chick
7.	pənkəsišeh	as on a man	17.	maŋu te? pən	The man went
8.	pənšeh	manlike	18.	maŋpa te? pən	The man goes.
9.	pənšehta?m	like men	19.	maŋke?tpa te? yomo	The woman also goes.
10.	te? pən	the man	20.	minpa te? ?une	The child comes.

PART 1. (14 points)

List all of the meaningful parts of these Zoque words and write their English equivalent beside it. (14 points - 1 point for each correct Zoque form and English translation. 0.5 off if either is incorrect)

Zoque	English	Zoque	English
pən	man	hi?ŋ	with
ta?m	plural/more than one	yomo	woman
kəsi	on	?une	small/little/child
kotoya	for	maŋ	go
ke?t	also	min	come
šeh	like/as	u	past (on verb)
tih	just/only	pa	present (on verb)
kahši	hen	te?	the

PART 2: (4 points)

Translate the following phrases into Zoque: (4 points: half marks if right form but wrong order)

English	Zoque
The child came.	Minu te? ?une.
The girl also went.	Maŋke?tu te? yomo?une.
with children	?unehi?ŋta?m
for women	yomokotoyata?m

PART 3: (2 points)

Translate the following Zoque words into English: (2 points) [These English translations can be expressed in a variety of word orders, of course, so full marks for translations with the right meaning]

Zoque	English
manutih te? yomo?une	The girl just/only went.
yomotihta?m	Just/only women.

SOLUTIONS: PROBLEM 3: Pitjantjatjara words borrowed from English

Pitjantjatjara is one of the Western Desert languages spoken by about 2,000 Australian Aboriginal people living in the northern part of South Australia and the southwest part of the Northern Territory.

Here are some examples of English words which have been incorporated into Pitjantjatjara. Some of them are pronounced in a similar way to their English counterparts, whereas others are pronounced in ways that are quite different.

English	Pitjantjatjara	English	Pitjantjatjara
teacher	tiitja	John	Tjaana
paper	piipa	school	kuula
shovel	tjapila	bus	paatja
room	ruuma	tent	tiinta
crowbar	kurupa	flour	palawa
ration	ratjina	bucket	pakata
rabbit	rapita	drunk (inebriated)	tarangka

NOTE: The vowel 'a' is pronounced like the vowel in *but* or *us* while 'aa' is a 'long a' pronounced more like the vowel written 'a' in *father*. The vowel written 'i' is pronounced like the vowel in *bit*, while *ii* is 'long i' which is more like the vowel sound in *bee* or *seed*. The vowel *u* is like the vowel in *put*, while the 'long u' written as *uu* is more like the vowel sound in *school* or *pool*. The long vowels, *ii*, *uu*, *aa*, in the Pijantjatjara words tend to be longer than in the corresponding English word. The letters *tj* represent a sound similar to English *ch* in *chin* but a little closer to *t* especially if followed by the vowel *a*. You will notice that English 's' changes into the Pitjantjatjara *tj* sound.

By comparing the English and Pitjantjatjara pairs of words, we can learn quite a bit about the vowel and consonant sounds of Pitjantjatjara, and also about the way in which these sounds may or may not pattern to form words. We can also see that certain rules or processes are applied in converting English words into Pitjantjatjara ones.

HINT: To answer the questions below, it is important to think about how the English words *sound* and not just how they are written.

Question 1: (2 points)

Under what condition must the initial vowel in these Pitjantjatjara words be a long vowel (written *aa*, *uu* or *ii*)?

If the Pitjantjatjara word derived from English has one or two syllables, then the first syllable of the borrowed word must have a long vowel in the first syllable.

Question 2: (2 points)

All these Pitjantjatjara words borrowed from English end in 'a'.

Does this word final vowel have a single source (or origin)? Explain the reasoning behind your answer.

NO. Words borrowed from English ones ending in a vowel sound, e.g., *teacher*, *paper*, *flour*, *crowbar* keep that vowel which is written as 'a' in Pitjantjatjara. If the English word ends in a consonant (e.g., *bus*, *school*...) then the vowel 'a' is added to the Pitjantjatjara form.

Question 3. (6 points: 2 for each of a, b & c)

- a. What sequences of consonant sounds are not permitted in the Pitjantjatjara words?

 p+l (flour), s+k (school), t+r (drunk), k+r (crowbar), w+p (crowbar) (THESE CAN BE WRITTEN USING ENGLISH LETTERS OR A MIXTURE OF BOTH English and Pitjantjatjara writing) (The trickier ones are sk and wb. I would be inclined to give full marks if 'wp/wb' is missing) (Some might consider that 'shovel' has a v+l sequence which is broken up in Pitj as pil. I would accept this also.) Some students might select n+k as an unacceptable sequence: drunk > tarangka. This would change answer to c. e.g. n is changed to ng before k. Again I'd be inclined to give at least some credit for this (even though it's wrong in that P does allow both nk and ngk but they can't know this from the data given, and more importantly they have failed to recognize that n in E. drunk represents the same sound as P ng but this is very sophisticated stuff!)
- b. Which examples illustrate this?
 - palawa, kuula, tarangka, kurupa OR flour, school, drunk, crowbar. (would expect fewer examples depending on answer to a. Full 2 points if answer to b is consistent with answer to a)
- c. How have the Pitjantjatjara speakers changed the sequence of sounds to avoid an 'illegal' consonant sequence inherited from the English borrowing?
 - To avoid the sequences pl, tr and kr a vowel identical to the following vowel is placed between the consonant sounds; to avoid the sequences s+k (from school) or w+b (from crowbar) the first consonant is 'dropped'. (Need to see both patterns to get full marks. Again need to adjust to answers to a and b) See extra comments on a. above re n+k in 'drunk'. Again answers to c. must be compatible with those for a. and b.

Question 4. (4 points: 2 + 2)

- a. Which English sounds correspond to the Pitjantjatjara sound written 'p'?
- f, p, b, v (0.5 for each one) (they might write bb given 'rabbit' is one of the words I'd allow this)
- b. What do the English sounds you have listed in answering Question 4a have in common? (HINT: Say them silently to yourself and note which part of your mouth moves in order to pronounce these sounds.)

They are all pronounced by moving the bottom lip/jaw into contact with another part of the mouth [upper lip (p, b) or upper teeth (f,v) in order to stop or constrict the outgoing airflow. [The last part of this answer (inside []) is not needed for full marks (=2).]

Question 5. (6 points = 1 + 5)

- a. If English *blood* were borrowed into Pitjantjatjara, how would the Pitjantjatjara word be written? **palata**
- b. Set out your reasoning for the form you have written for *blood*.
 - 1. 'b' would be written as 'p'
 - 2. the vowel sound written 'oo' in English would be written as 'a'
 - 3. p+l sequence would be broken up by insertion of vowel 'a' as the English vowel sound in *blood* is written as 'a'. (inserted vowel is a copy of the following vowel)
 - 4. The 'd' sound would be written as 't'.
 - 5. The word must end in 'a', so that vowel would be added./ OR English word ends in a consonant so 'a' must be added in Pitjantjatjara.

[Each of these 5 steps gets 1 point; they might conflate steps, e.g., 1 and 4, in their answer but it would be worth a point for each part. If they write a 'wrong' form for 'blood' 0.5 we may need to adjust marking for the reasons given for their form]

SOLUTION: Problem 4: Syntax rules to transform strings

This problem is about rules that turn things into other things. You start with a sequence (or 'string') of characters. If your string contains a character that appears on the left side of the arrow in a rule, you can turn that character into whatever is on the right side of the arrow in that rule. You can apply different rules to your string over and over again until no more moves are possible. You're *not* allowed to twiddle the order of the characters in your string.

Here are the rules:

 $S \rightarrow AB$

 $A \rightarrow ab$

 $A \rightarrow aAb$

 $B \rightarrow bcd$

 $B \rightarrow bBc$

PART 1: (11 points for Part one)

If you start with 'S', which of these strings is it possible to end up with using these rules? (Put a tick to the right of the possible strings, and a cross to the right of the impossible ones.)

- I. abcd
- 2. abbcd
- 3. aabbbcd
- 4. aaabbbcd
- 5. abbbbcdcc
- 6. aabbccdcc
- 7. aabbbbcdc
- 8. aaabbbbcd
- 9. aaabbbbcdc
- 10. aabbbbbcdcc
- II. aaabbbbbbbcdcc

Part one: Strings 2, 3, 5, 7, 8, 10, and 11 can be generated.

[The template is $a_x + b_x + c_y + bcd + d_y$ That is, x repetitions of the character 'a' followed by x repetitions of the character 'b' (and so on).]

PART 2: (9 points for Part two)

Here is a string that can *not* be generated by these rules: **bbbbcdccc** Can you add a rule to all the others so that this string *can* be generated?

<u>Part two:</u> There are a couple of possibilities. Contestants would be most likely to think of adding this to the list of rules: $S \to B$

It's also possible some would try allowing an empty right-side: $A \rightarrow \emptyset$

SOLUTION: PROBLEM 5: Japanese Tenji script

Braille is a tactile writing system, based on a series of raised dots, that
is widely used by the blind. It was invented in 1821 by Louis Braille to
write French, but has since been adapted to many other languages.
English, which uses the Roman alphabet just as French does, required
very little adaptation, but languages that do not use the Roman alpha-
bet, such as Japanese, Korean, or Chinese, are often organized in a very
different manner!

To the right is a Japanese word written in the *tenji* ("dot characters") writing system. The large dots represent the raised bumps; the tiny dots represent empty positions.

A1. The following *tenji* words represent *atari*, *haiku*, *katana*, *kimono*, *koi*, and *sake*. Which is which? You don't need to know either Japanese or Braille to figure it out; you'll find that the system is highly logical.

a	•: •: •: •: •: ::	b	:: •: :: •:
c	• • • • • • • • • • • • • • • • • • • •	d	• • • • •
e	·• • · • · • ·	f	•· •· •· ·· •• ••

A2. What are the following words?

g	:::::::::::::::::::::::::::::::::::::::	h	:: ::
---	---	---	-------

A3. Write the following words in tenji characters:

i. samurai	j. miso

A1: (6 points: 1 point each)

a. haiku b. sake c. katana d. kimono e. koi f. atari

A2 (4 points: 2 points each)

g. karate h. anime

A3:

i. samurai (4 points)

•		•	•	•		•	
	•		•		•	•	
	•	•	•				

j. miso (2 points)

• . . • • •

A4. (4 points) Explain the logic behind this Tenji script.

Tenji is an **alphabetical** writing system in which each Vowel and each Consonant has a specific sign. Syllables are represented by combining the consonant and vowel sound into a block made up of 6 cells arranged into 2 columns and 3 rows; (some syllables only have a vowel sound).

This is an essential part of the answer to get full marks:

The vowel signs use the cells in the top row and the middle row left cell; the consonant signs use the remaining cells: bottom row cells and the middle row right cell.

(Need to use discretion in how to award marks here)
